Dance For A Difference 2026 Ambassador:

Makynzie Ferrera

In 2018, we found out during our 20 week anatomy scan that Makynzie had a congenital heart defect (CHD). She was originally diagnosed with two ventricular septal defects (VSD)—later we would find out that she had a “swiss cheese” heart and had many VSDs present. In the first 6 months of Makynzie’s life she struggled with her heart and an airway defect, and during this time we became well acquainted with Children’s. We originally saw Children’s for GI, ENT and feeding therapy services, and ultimately moved her cardiology care to Children’s as well to have all of her specialists under one umbrella. Makynzie required a feeding tube to be placed at Children’s when she was 4 months old. Her heart continued to drive many of her issues and two days before she turned 7 months old she had a life saving heart procedure. Her VSD’s were repaired with a device closure via catheterization. The surgery was successful and today Makynzie has her “heart jewelry” on the inside and lives a life without restrictions. She still follows up routinely with Children’s cardiology and will be followed by cardiology the rest of her life. We owe so much to Children’s and are grateful to have our spunky girl in good health!
